We don't sell products, we create solutions

Main Objective To Install Construction Management Software

❖ **Effortless Access to Information:**

It's always necessary to maintain a smooth flow of information. However, with the massive flow of data at every level having access to all of it was quite a pain, too. Traditional methods were time consuming and the possibility of missed information always remained.

Main Objective To Install Construction Management Software

❖ **Reduced Paperwork**:

The first thing that comes to every person mind is when comes to construction management is paperwork. Right from the bidding phase till its handover, documents are generated at every step. Now, being stuck on the jobsite or office for extra . couple of hours to deal with paperwork for one day is okay, but considering the deadline of projects and during the times of emergency is a no-no. Like any other sector it is important to correctly file every single piece of paper so that it could be found easily.

Main Objective To Install Construction Management Software

❖ **Improved Communication:**

The key element of a successful construction project is proper communication and visibility. However, the construction sector is not limited to the four walls. You could be located in West Coast and handling a project in the east coast, so proper communication is what makes things tick. So, how does a construction management software fit in here? With a construction management software communication becomes much simpler and faster. The inflow of information is quick and lucid and irrespective of the number of stakeholders in a project everyone remains on the same page. This allows quicker responses to RFIs, punchlist and

critical questions with better planning of a project in general.

Main Objective To Install Construction Management Software

❖ **Mobility:**

A construction project management process cannot be termed successful if there is lack of mobility. It demands so, as Manager may need to work from office computer or while manager travelling and need to know everything what is going on. And it is not just manager! This is applicable for everyone else involved, from the client down to the mason or ganger man on-site. Construction mobile apps fit right in and what a time saver that is! if manager ever needs additional information then they will no longer have to go and look for the site manager.

Main Objective To Install Construction Management Software

❖ **Save Time, Resources and Money!**

The three most important components of a construction project are money, time and resource. Opting for project construction software means quicker coordination of tasks owing to enhanced co-ordination, reduced error rate, re-work and others. So, you save resources, time and money. Moreover, with advanced search features all information is right at the fingertip, so no more going through thousands of documents to find the crucial information that you need. You also save more as there is no requirement for filing cabinets or the necessity to keep someone who will retrieve document every time you need it. This ensures improvement and timely completion of a construction project.
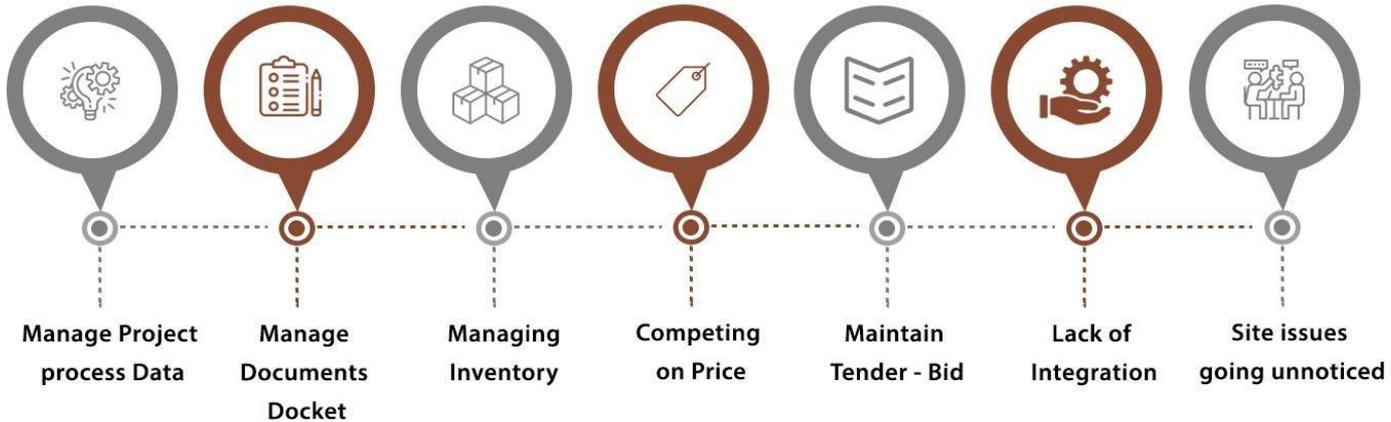

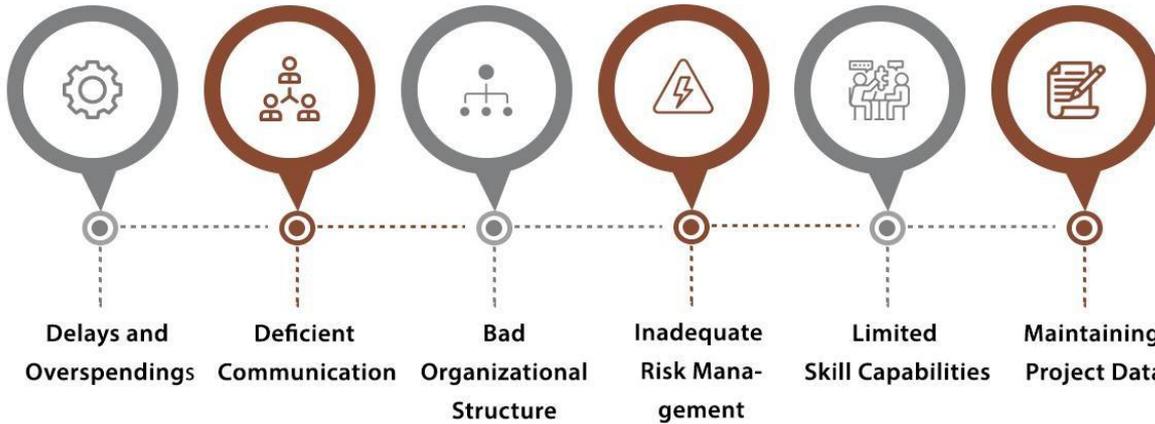

Construction Management Software

❖ Construction management software is a project management platform that helps companies in processes like budget management, communication, decision-making, and job scheduling, to name a few. Its goal is to make construction business processes a lot easier through automation.

❖ Construction project management software is a tool used by professionals to simplify construction management processes. It is used to streamline day to day tasks to improve the delivery of projects, which ultimately impact the bottom line of construction companies.

Process Of Construction Management Software

- ❖ Survey
- ❖ Project Engineering,
- ❖ Purchase
- ❖ Sites
- ❖ Contractor

- ❖ Digital File Locker

Problems Without Organized System

Delays and Overspendings

Deficient Communication

Bad Organizational Structure

Inadequate Risk Management

Limited Skill Capabilities

Maintaining Project Data

Manage Project process Data

Manage Documents Docket

Managing Inventory

Competing on Price

Maintain Tender - Bid

Lack of Integration

Site issues going unnoticed

What We Offer

❖ Customer Relationship management.

❖ Accounting and Financials.

❖ Project Scheduling / Management.

❖ Team Management.

❖ Project management and Document management.

❖ Material management and Equipment Tracking.

❖ Surety Bonding.

What We Offer

❖ Tender – Bid management.

❖ Job Costing and budgeting.

❖ Financial visibility.

❖ Accountability.

❖ Customized reports.

❖ Store – Inventory management.

❖ Mobile combability.

Modules We Provide

- ❖ Field Works Mobile App

- ❖ Field Notes

- ❖ Daily Reports

- ❖ Email Integration

- ❖ Project Files

- ❖ Quotation Management

- ❖ Contacts Management

- ❖ Audit Log

- ❖ Milestones

- ❖ Corporate Management

- ❖ Issues

- ❖ Payment Management

- ❖ Rights Management

- ❖ Reminders

- ❖ Task Management

Modules We Provide

❖ **Field Works Mobile App:**

Construction365cloud - iOS and Android app allowing you to track information from the field without an internet connection.

❖ **Field Notes:**

Field Workers can give detailed feedback instantly to the back office.

❖ **Daily Reports:**

Create daily logs tracking weather, crew mix, labor performed, and more.

Modules We Provide

❖ **Email Integration:**

Manage all the details of your projects within a fully searchable database.

❖ **Project Files:**

In the Cloud application there is unlimited cloud storage to share files with your team.

❖ **Quotation Management:**

The system is designed to allow quotations to be prepared quickly and easily, with a minimum amount of data entry.

Modules We Provide
